

Interview task for PGCE Secondary Computing

During your interview you will be asked to teach a 10 minute 'mini lesson' to your interviewers and any other candidates invited on the day. It should model components of a typical lesson, including clear aim and objectives, a main activity and plenary.

You may choose to present one of the following Key Stage 3 or Key Stage 4 topics:

- 1- Key Stage 3: Algorithms and Programming
- 2- Key Stage 3: Hardware and/or software components that make up computer systems
- 3- Key Stage 4: Ethical, Legal and Environmental Impacts of Digital technology on Society

Here are some further notes for guidance:

- 1- You will need to speak clearly and audibly.
- 2- You will have a maximum of 8 minutes for your presentation, and 2 minutes for questions from your interviewers.
- 3- MS PowerPoint will be available, although doesn't necessarily need to be used.
- 4- Please have a copy of your notes to give your interviewer.
- 5- It is a good idea to practice your mini lesson and avoid reading it directly from your notes.

Please also complete the Computing Subject Knowledge Audit and bring it with you on the day.
